

Air-cooled SUB-Nanosecond Laser

The SUB50A-700 laser DATASHEET, March 2023

Air-cooled SUB-NANOSECOND E-O Q-SWITCHED LASER

The **SUB50A-700** model is an **air-cooled** Electro-Optically Q-switched DPSS **1064 nm** laser delivering up to **50 mJ** energy and **700 ps** pulse duration at **20 Hz** repetition rate. Laser design is based on short laser cavity direct pumping MO and power amplifiers with the **VCSEL pump** technology. The know-how on thermo-stabilized structure fixed MO and AMPL elements gives extremely stable output parameters performance. **Small laser form-factor** and unique **≤200 ps optical jitter** is welcome point for integration into OEM. Due to relatively high pulse energy, good **M²≤1.3** parameter and short sub-ns pulse duration, laser delivers **up to 71 MW** peak power. An optional conversion module to green (532 nm) and ultraviolet (355 nm, 266 nm) is

available.
